

## 9.16 Village of East Hampton

This section presents the jurisdictional annex for the Village of East Hampton. It includes resources and information to assist public and private sectors to reduce losses from future hazard events. This annex is not guidance of what to do when a disaster occurs. Rather, this annex concentrates on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. This annex includes a general overview of the municipality and who in the Village participated in the planning process; an assessment of the Village of East Hampton's risk and vulnerability; the different capabilities utilized in the Village; and an action plan that will be implemented to achieve a more resilient community.

### 9.16.1 Hazard Mitigation Planning Team

The following individuals have been identified as the Village of East Hampton's hazard mitigation plan primary and alternate points of contact.

#### Table 9.16-1. Hazard Mitigation Planning Team

### 9.16.2 Municipal Profile

The Village of East Hampton was founded in 1648 by English farmers. These farmers laid out their plantations similar to the Puritan New England farms, with a center of houses and barns concentrated on either side of a wide common and outlying land divided into lots for growing crops, livestock pastures, and harvesting salt hay and timber. The Village remained a quiet farming community until the late 1800s, when it began to develop as a resort for the wealthy upper class from New York City. The Village of East Hampton has become a major weekend destination for many people during the summer months. The Village was incorporated in 1920. Today, the area around the Village is often referred to as "The Hamptons".

The Village of East Hampton is located in the Town of East Hampton. The Village is a small, more exclusive area of the Town of the East Hampton. The Village is located on the South Shore of Long Island and is known for its farmland and scenic beaches.

The Village of East Hampton is served by a publicly elected mayor, four publicly elected trustees, a village administrator, staff, building and public works departments, planning and zoning departments, a code enforcement department, a police department, and volunteer fire and emergency services department.

According to the U.S. Census, the 2010 population for the Village of East Hampton was 1,083. The estimated 2017 population was 1,034, a 4.5 percent decrease from the 2010 Census. Data from the 2017 U.S. Census American Community Survey indicate that 1.0 percent of the population is 5 years of age or younger and 40.0 percent is 65 years of age or older. Communities must deploy a support system that enables all populations to safely reach shelters or to quickly evacuate a hazard area.

## 9.16.3 Growth/Development Trends

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to understanding a jurisdiction's overall risk to its hazards of concern. Table 9.16-2 summarizes recent and expected future development trends, including major residential/commercial development and major infrastructure development. The figures at the end of this annex illustrate the geographically-delineated hazard areas and the location of potential new development, where available. The recent and anticipated development depicted on these figures excludes the Suffolk County wastewater upgrades; refer to Section 4 (County Profile) for additional information on this development.

### 9.16.4 Capability Assessment

The Village of East Hampton performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Section 5 (Capability Assessment) describes the components included in the capability assessment and their significance for hazard mitigation planning. This section summarizes the following findings of the assessment:

- An assessment of legal and regulatory capabilities.
- Development and permitting capabilities.
- An assessment of fiscal capabilities.
- An assessment of education and outreach capabilities.
- Information on National Flood Insurance Program (NFIP) compliance.
- Classification under various community mitigation programs.
- The community's adaptive capacity for the impacts of climate change.

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into the day-today local government operations. As part of this planning effort, planning/policy documents were reviewed, and each jurisdiction was surveyed to obtain a better understanding of their progress in plan integration. Areas with current mitigation integration are summarized in Capability Assessment (Section 9.16.4). The Village of East Hampton identified specific integration activities that will be incorporated into municipal procedures are included in the updated mitigation strategy. Appendix G provides the results of the planning/policy document review and the answers to integration survey questions.

### Planning, Legal, and Regulatory Capability

The table below summarizes the regulatory tools that are available to the Village of East Hampton and where hazard mitigation has been integrated.

### Table 9.16-4. Development and Permitting Capability

| Indicate if your jurisdiction implements the following  | Response<br>Yes/No; Provide further detail                     |
|---|--|
| Development Permits. If yes, what department?   | Yes, Building Department                                       |
| Permits are tracked by hazard area. For example, floodplain development permits.  | Yes  |
| Buildable land inventory<br>If yes, please describe<br>If no, please quantitatively describe the level of buildout in the jurisdiction. | 2002 Plan had a buildable land review<br>but mainly built out. |

#### **Administrative and Technical Capability**

The table below summarizes potential staff and personnel resources available to the Village of East Hampton.

#### Table 9.16-5. Administrative and Technical Capabilities

| Resources<br>Administrative Capability  | Available?<br>(Yes or No) | Department/ Agency/Position  |
|---|---------------------------|--|
| Planning Board  | Yes                       | Planning Board   |
| Mitigation Planning Committee   | No                        | -  |
| Environmental Board/Commission  | No                        | -  |
| Open Space Board/Committee  | No                        | -  |
| Economic Development Commission/Committee   | No                        | -  |
| Warning Systems / Services<br>(reverse 911, outdoor warning signals)                      | Yes                       | Social media, website, radio stations, have<br>ability to use reverse 911, siren warning<br>system and PA system   |
| Maintenance programs to reduce risk   | Yes                       | DPW cleans catch and storm basins and<br>checks stormwater infrastructure in MS4<br>areas, aggressive tree trimming program<br>(in conjunction with PSEG LI), beach<br>maintenance to remove sand from parking<br>lots, etc. |
| Mutual aid agreements   | Yes                       | County, Town, Fire Department and<br>Ambulance, Police   |
| Technical/Staffing Capability   |                           |  |
| Planners or engineers with knowledge of land development<br>and land management practices | No                        | -  |

| Resources   | Available?<br>(Yes or No) | Department/ Agency/Position  |
|---|---------------------------|--|
| Engineers or professionals trained in building or infrastructure construction practices                       | Yes                       | Code Enforcement and Building Dept.  |
| Planners or engineers with an understanding of natural hazards  | Yes                       | Code Enforcement and Individual<br>Departments   |
| Staff with expertise or training in benefit/cost analysis   | Yes                       | Individual Departments   |
| Professionals trained in conducting damage assessments  | Yes                       | Building Department and Village<br>Engineer in conjunction with professional<br>services |
| Personnel skilled or trained in GIS and/or Hazards United<br>States (HAZUS) – Multi-Hazards (MH) applications | Yes                       | Police Lieutenant  |
| Scientist familiar with natural hazards   | No                        | -  |
| NFIP Floodplain Administrator (FPA)   | Yes                       | Ken Collum, Code Enforcement Officer   |
| Surveyor(s)   | No                        | -  |
| Emergency Manager   | Yes                       | Emergency Preparedness (Police Chief)  |
| Grant writer(s)   | Yes                       | Individual Departments   |
| Resilience Officer  | No                        | -  |
| Other (this could include stormwater engineer, environmental specialist, etc.)                                | No                        | -  |

### **Fiscal Capability**

The table below summarizes financial resources available to the Village of East Hampton.

#### Table 9.16-6. Fiscal Capabilities

| Financial Resources   | Accessible or Eligible to Use<br>(Yes/No) |
|---|---|
| Community development Block Grants (CDBG, CDBG-DR)                          | Yes                                       |
| Capital improvements project funding  | Yes                                       |
| Authority to levy taxes for specific purposes                               | No  |
| User fees for water, sewer, gas or electric service                         | No  |
| Impact fees for homebuyers or developers of new development/homes           | Yes                                       |
| Stormwater utility fee  | Yes, for development of more than 1 acre  |
| Incur debt through general obligation bonds                                 | Yes                                       |
| Incur debt through special tax bonds  | Yes                                       |
| Incur debt through private activity bonds                                   | No  |
| Withhold public expenditures in hazard-prone areas                          | No  |
| Other federal or state Funding Programs                                     | Yes                                       |
| Open Space Acquisition funding programs                                     | Yes                                       |
| Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution]) | No  |

### **Education and Outreach Capability**

The table below summarizes the education and outreach resources available to the Village of East Hampton.

#### Table 9.16-7. Education and Outreach Capabilities

| Indicate if your jurisdiction has the following resources   | Yes/No; Please describe   |
|---|---|
| Public information officer or communications office?  | Village Administrator   |
| Personnel skilled or trained in website development?  | Yes, Village Administrator  |
| Hazard mitigation information available on your website; if yes, describe   | Yes, Ocean Awareness, Storms, Coronavirus, and the County HMP   |
| Social media for hazard mitigation education and outreach; if yes, briefly describe.                                    | Facebook (PD, FD, EMS, and Village), Twitter (PD)   |
| Citizen boards or commissions that address issues related to hazard mitigation; if yes, briefly describe.               | No  |
| Other programs already in place that could be used to communicate hazard-related information; if yes, briefly describe. | Use local television station, Joint Emergency<br>Operations Center with the Town can reach out to<br>the television station to get messaging out through<br>PSA's, etc.                                 |
| Warning systems for hazard events; if yes, briefly describe.  | Social media, website, radio stations, have ability<br>to use reverse 911, siren warning system and PA<br>system  |
| Natural disaster/safety programs in place for schools; if yes, briefly describe.  | Two schools (elementary school and middle<br>school) each have a full time officer staffed. Police<br>complete talks at schools and complete drills for<br>Fire, EMS, and PD and share emergency plans. |
| Other   | None  |

#### **Community Classifications**

The table below summarizes classifications for community programs available to the Village of East Hampton.

#### Table 9.16-8. Community Classifications

| Program   | Participating?<br>(Yes/No) | Classification<br>(if applicable) | Date Classified<br>(if applicable) |
|---|----------------------------|-----------------------------------|------------------------------------|
| Community Rating System (CRS)                           | NP                         | -                                 | -                                  |
| Building Code Effectiveness Grading Schedule (BCEGS)    | NP                         | -                                 | -                                  |
| Public Protection (ISO Fire Protection Classes 1 to 10) | Yes                        | 3/3X                              | 2015                               |
| NYSDEC Climate Smart Community                          | NP                         | -                                 | -                                  |
| Storm Ready Certification                               | NP                         | -                                 | -                                  |
| Firewise Communities classification                     | NP                         | -                                 | -                                  |
| Other   | No                         | -                                 | -                                  |

# Adaptive Capacity

Adaptive capacity is defined as "the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences" (IPCC 2014). In other words, it describes a jurisdiction's current ability to adjust to, protect from, or withstand a hazard event. This term is often discussed in reference to climate change; however, adaptive capacity also includes an understanding of local capacity for adapting to current and future risks and changing conditions. The table below summarizes the adaptive capacity for each hazard and the jurisdiction's rating.

#### Table 9.16-9. Adaptive Capacity

| Hazard                           | Adaptive Capacity (Capabilities) - High/Medium/Low* |
|----------------------------------|---|
| Coastal Erosion                  | Medium  |
| Cyber Security                   | Medium  |
| Disease Outbreak                 | Medium  |
| Drought                          | Medium  |
| Earthquake                       | Medium  |
| Expansive Soils                  | Medium  |
| Extreme Temperature              | Medium  |
| Flood                            | Medium  |
| Groundwater Contamination        | Medium  |
| Hurricane                        | Medium  |
| Infestation and Invasive Species | Medium  |
| Nor'Easter                       | Medium  |
| Severe Storm                     | Medium  |
| Severe Winter Storm              | High  |
| Shallow Groundwater              | Medium  |
| Wildfire                         | High  |

\*High Capacity exists and is in use

Medium Capacity may exist; but is not used or could use some improvement

Low Capacity does not exist or could use substantial improvement

Unsure Not enough information is known to assign a rating

The Village uses information from the National Weather Service to determine the possible impacts of climate change. The Village administration is supportive of integrating climate change in policies and actions. Climate change is already being integrated into current policies/plans or actions (projects/monitoring) within the Village. The Village is forward thinking and has made various environmental and climate change related improvements (electric/hybrid cars, solar arrays, etc.), invested in wind farms and alternative energies, etc.

### 9.16.5 National Flood Insurance Program

This section provides specific information on the management and regulation of the regulatory floodplain.

### NFIP Floodplain Administrator (FPA)

Kenneth Collum, Code Enforcement Officer

### National Flood Insurance Program (NFIP) Summary

The following table summarizes the NFIP statistics for the Village of East Hampton.

#### Table 9.16-10. NFIP Summary

| Municipality            | # Policies | # Claims<br>(Losses) | Total<br>Loss<br>Payments | # RL<br>Properties |
|-------------------------|------------|----------------------|---------------------------|--------------------|
| Village of East Hampton | 372        | 68                   | \$1,205,494               | 4                  |

Source: FEMA 2020

Notes: According to FEMA statistics as of 7/13/2020 RL Repetitive Loss

### **Flood Vulnerability Summary**

The oceanfront, Hook Pond, and Georgica Pond are the flood prone areas of the Village. North Main street and Cedar Street often flood. Route 27 floods in a worst-case scenario.

A list of flood-damaged homes or interested in mitigation is not maintained. Substantial Damage estimates are conducted through inspection and with insurance companies.

Following Hurricane Sandy, there were two properties damaged due to flooding. These residential properties had 18" and 10" of water respectively on their first floors; there were no basements for either property. Due to the value of the land being significantly higher than the cost of the homes, the homes were torn down and rebuilt. Substantial Damage estimates are not done by the Floodplain Administrator. The funding source for these two mitigation projects was private funding by the property owners.

#### Resources

The community FDPO identifies the Code Enforcement Officer as the local NFIP Floodplain Administrator, currently Ken Collum, for which floodplain administration is an auxiliary duty.

Duties and responsibilities of the Code Enforcement Office/NFIP Administrator are permit review, inspections for new construction and FEMA compliance, damage assessments completed when asked, record keeping is inhouse using the MUNICITY program, and GIS is completed through Suffolk County and vendors.

Ken Collum feels he is adequately supported and trained to fulfill his responsibilities as the municipal floodplain administrator. Ken Collum is not certified in floodplain management, but attends regular continuing education programs for code enforcement.

Education and outreach is not conducted in the Village of East Hampton. Substantial improvement is determined through cost evaluation of Fair Market Value.

Duties and responsibilities of the Code Enforcement Office/NFIP Administrator are permit review, inspections for new construction and FEMA compliance, and pre-construction meetings.

Additional training and information on both floodplain management would be welcomed.

#### **Compliance History**

Village of East Hampton joined the NFIP on September 30, 1980, and is currently an active member of the NFIP. The current effective Flood Insurance Rate Maps are dated September 25, 2009.

The community is currently in good standing in the NFIP and has no outstanding compliance issues. The Village of East Hampton has completed Community Assistance Visits (CAV), with the most recent visit completed on February 14, 2017.

#### Regulatory

The communities Flood Damage Prevention Ordinance (FDPO) was last updated on April 16, 2010 and is found at Chapter 160 of the local code. The Villages floodplain management program meets minimum requirements. Floodplain management is supported by the actions of the Zoning Board.

#### **Community Rating System**

The Village does not participate in the Community Rating System but would be open to discussing the possibility of joining.

## 9.16.6 Integration with Other Planning Initiatives

As this HMP update is implemented, the Village of East Hampton will use information from the plan as the best available science and data for natural hazards. The capability assessment presented in this annex identifies codes, plans, and programs that provide opportunities for integration. The Suffolk County and local action plans developed for this HMP update actions related to plan integration, as well as progress on these actions, will be reported through the progress reporting process described in Volume I. New opportunities for integration also will be identified as part of the annual progress report.

### **Existing Integration**

- **Planning Board:** The Village planning board has the authority to approve subdivision of property and other development approvals. The planning board is also responsible for preparing or changing a comprehensive plan for the Village.
- **Zoning Board of Appeals:** The Board of Trustees of the Village is responsible for the adoption of the zoning law and amendments. The zoning law is the basis on which the zoning board of appeals works. Zoning regulations are adopted in accordance with the Village's comprehensive plan.
- **Design Review Board:** The purposes of the Design Review Board are:
  - To promote those qualities in the environment which retain or bring quality to life as well as material value to the community.
  - To foster the attractiveness and functional utility of the community as a place to live and work.
  - To preserve the character and quality of our heritage by maintaining the integrity of those areas which have a discernible character or are of special historic significance.
  - To protect existing investments in the area.
  - To encourage, where appropriate, a mix of uses within permissible use zones.
  - To raise the level of community expectations for the quality of its environment.
  - To control the exterior color of buildings so as to best promote and protect the above purposes.
- **Emergency Services:** The Village has its own police and fire departments and an ambulance association. They are located in the Emergency Services Building on Cedar Street.
  - Emergency Operations Center: The Emergency Service Building also houses an Emergency Operations Center (EOC) which is the Main Coordinating center for Town-wide emergency and disaster operations. The Town and Village Public Officials and Emergency Service coordinators work together using this facility to plan, organize and coordinate Emergency Operations on behalf of the public.
  - Ambulance: The East Hampton Village Ambulance Association provides emergency medical services. The Association has two chief officers and trained volunteers including emergency medical technicians. The East Hampton Village Ambulance Association provides emergency medical services.
  - Fire: The East Hampton Fire Department provides protection to the residents and business owners of, and visitors to, the Village of East Hampton and the Town of East Hampton.
  - Emergency Communications: The East Hampton Village Emergency Communications Center dispatches emergency calls to The East Hampton, Sag Harbor, Springs, Amagansett, and Montauk Fire Departments, and their Ambulance Services.
- **Police Department:** The East Hampton Village Police Department is a full-service police department. It provides a full range of law enforcement services to the Village of East Hampton.

- **Building Department:** The Office of Building and Zoning encompasses all of the traditional roles performed by a building inspector and a zoning inspector, as well as those of the Coastal Erosion Hazard Area Administrator, Flood Plain Administrator and Freshwater Wetlands Administrator. The Department enforces the Village Code and the New York State Uniform Fire Prevention and Building Code.
- **Department of Code Enforcement:** The Department of Code Enforcement combines the traditional roles and duties of the Building Inspector, Fire Marshal, Zoning Inspector, and the myriad of titles and duties normally found in local government.
- **Department of Public Works:** The Village of East Hampton Department of Public Works maintains property owned by the village. It provides services for the well-being and convenience of village residents. It maintains all code enforcement, fire, police and public works vehicles and equipment. The department of public works is responsible for snow removal and sanding roads and sidewalks in the Village.

### **Opportunities for Future Integration**

None identified.

### 9.16.7 Evacuation, Sheltering, Temporary Housing, and Permanent Housing

Evacuation routes, sheltering measures, temporary housing, and permanent housing must all be in place and available for public awareness to protect residents, mitigate risk, and relocate residents, if necessary, to maintain post-disaster social and economic stability.

#### **Evacuation Routes**

The Village has two evacuation routes; Route 27 and Route 114. Both roadways are state roadways.

#### **Sheltering**

The Village has no shelters located within Village boundaries. Instead, the Village relies on the Town of East Hampton for sheltering.

#### **Temporary Housing**

Locations for the placement of temporary housing are identified in the Town of East Hampton at the East Hampton airport.

#### **Permanent Housing**

The Village is built out and no locations have been identified for the relocation of permanent housing.

### 9.16.8 Hazard Event History Specific to the Village of East Hampton

Suffolk County has a history of natural and non-natural hazard events as detailed in Volume I, Section 5 (Risk Assessment) of this plan. A summary of historical events is provided in each of the hazard profiles and includes a chronology of events that have affected the County and its municipalities. The Village of East Hampton's history of federally-declared (as presented by FEMA) and significant hazard events (as presented in NOAA-NCEI) is consistent with that of Suffolk County. Table 9.16-11 provides details regarding municipal-specific loss and damages the Village experienced during hazard events. Information provided in the table below is based

on reference material or local sources. For details of these and additional events, refer to Volume I, Section 5.0 of this plan.

| Dates of<br>Event       | Event Type<br>(Disaster<br>Declaration if<br>applicable)                              | County<br>Designated? | Summary of Event  | Municipal Summary of<br>Damages and Losses  |
|-------------------------|---|-----------------------|---|---|
| February 8<br>– 9, 2013 | Severe Winter<br>Storm and<br>Snowstorm<br>(FEMA DR-<br>4111)                         | Yes                   | Low pressure that formed along the<br>northern Gulf coast by the morning of<br>Thursday, February 7, 2013 moved<br>northeast to near Cape Hatteras by the<br>morning of Friday, February 8, 2013 .<br>The low then rapidly intensified while<br>moving northeast to a position east of<br>Cape Cod by the morning of Saturday,<br>February 9, 2013, producing very heavy<br>snowfall and blizzard conditions across<br>central and eastern Long Island on<br>February 8th and 9th, and winter storm<br>conditions across the rest of southeast<br>New York. | Overtime was necessary for snow cleanup.  |
| March 14 –<br>15, 2017  | Severe Winter<br>Storm and<br>Snowstorm,<br>along with high<br>wind (FEMA<br>DR-4322) | Yes                   | A strong area of low pressure tracked<br>well offshore of the eastern seaboard,<br>but tracked close enough to eastern<br>Long Island to bring heavy snow bands<br>during the morning and early afternoon<br>on Tuesday, March 13, 2018. Snowfall<br>rates were 1 to 2 inches per hour at<br>times in the morning across eastern<br>Long Island. On Tuesday, March 14th,<br>rapidly deepening low pressure<br>continued tracked up the eastern<br>seaboard  | The public reported 10.3<br>inches of snow in East<br>Hampton. Employee<br>overtime was necessary.<br>In East Hampton, the fire<br>department reported all<br>lanes of Montauk Highway<br>were closed between Davids<br>Lane and Dayton Lane due<br>to downed trees. This<br>occurred at 309 pm.<br>.Northwest Suffolk reported<br>\$50K in property damage |

## 9.16.9 Hazard Ranking and Jurisdiction-Specific Vulnerabilities

The hazard profiles in Section 5 (Risk Assessment) of this plan have detailed information regarding each plan participant's vulnerability to the identified hazards. The following summarizes critical facility and community lifeline flood exposure, and the hazards of greatest concern and risk to the Village of East Hampton. For additional vulnerability information relevant to this jurisdiction, refer to Section 5.

A gradient of certainty was developed to summarize the confidence level regarding the input used to populate the hazard ranking. A certainty factor of high, medium or low was selected and assigned to each hazard to provide a level of transparency and create increased understanding of the data used to support the resulting ranking. The following scale was used to assign a certainty factor to each hazard:

- High—Defined scenario/event to evaluate; probability calculated; evidenced-based/quantitative assessment to estimate potential impacts through hazard modeling.
- Moderate—Defined scenario/event or only a hazard area to evaluate; estimated probability; combination
  of quantitative (exposure analysis, no hazard modeling) and qualitative data to estimate potential impacts.
- Low—Scenario or hazard area is undefined; there is a degree of uncertainty regarding event probability; majority of potential impacts are qualitative.

### **Critical Facilities**

New York Department of Environmental Conservation (DEC) Statute 6 CRR-NY 502.4 sets forth floodplain management criteria for State projects located in flood hazard areas. The law states that no such projects related to critical facilities shall be undertaken in a Special Flood Hazard Area (SFHA) unless constructed according to specific mitigation specifications, including being raised 2' above the Base Flood Elevation (BFE). This statute is outlined at http://tinyurl.com/6-CRR-NY-502-4. While all vulnerabilities should be assessed and documented, the State places a high priority on exposure to flooding. Critical facilities located in an SFHA, or having ever sustained previous flooding, must be protected to the 500-year flood event, or worst damage scenario. For those that do not meet these criteria, the jurisdiction must identify an action to achieve this level of protection (NYS DHSES 2017).

The table below identifies critical facilities and community lifelines located in the 1-percent and 0.2-percent floodplain. It also summarizes if the facility is already mitigated in compliance with NYS standards (i.e., to the 0.2-percent annual chance event or worse-case scenario), or if a new mitigation action is proposed in the plan update.

|                        |                       | 1% E               | 1% Event |               | Complies with<br>NYS  | Addressed by<br>Proposed            |
|------------------------|-----------------------|--------------------|----------|---------------|---|-------------------------------------|

### Table 9.16-12. Potential Flood Losses to Critical Facilities

Source: Suffolk County 2020; FEMA 2009

Notes: x = Facility is located in the floodplain boundary. \*Community Lifeline

(2) In some cases, a facility may be located in the DFIRM flood hazard boundary; however HAZUS did not calculate potential loss. This may be because the depth of flooding does not amount to any damages to the structure according to the depth damage function used in HAZUS for that facility type.

### Hazard Ranking

This section provides the community specific identification of the primary hazard concerns based on identified problems, impacts and the results of the risk assessment as presented in Section 5 (Risk Assessment) of the plan.

<sup>(1)</sup> HAZUS-MH 2.1 provides a general indication of the maximum restoration time for 100% operations. Clearly, a great deal of effort is needed to quickly restore essential facilities to full functionality; therefore this will be an indication of the maximum downtime (HAZUS-MH 2.1 User Manual).

The ranking process involves an assessment of the likelihood of occurrence for each hazard, along with its potential impacts on people, property, and the economy as well as community capability and changing future climate conditions. This input supports the mitigation action development to target those hazards with highest level of concern.

As discussed in Section 5.3 (Hazard Ranking), each participating jurisdiction may have differing degrees of risk exposure and vulnerability compared to Suffolk County as a whole. Therefore, each municipality ranked the degree of risk to each hazard as it pertains to their community. The table below summarizes the hazard risk/vulnerability rankings of potential hazards for the Village of East Hampton. The Village of East Hampton has reviewed the county hazard risk/vulnerability risk ranking table and provided input to its individual results to reflect the relative risk of the hazards of concern to the community.

During the review of the hazard/vulnerability risk ranking, the Village of East Hampton indicated the following:

• The Village changed the calculated hazard ranking of wildfire from medium to low. This reflects the hazard ranking that was reported on in the 2014. The Village noted the risk for wildfire has not changed since 2014.

| Coastal Erosion        | Cyber Security | Disease<br>Outbreak          | Drought     | Earthquake                             | Expansive Soils |
|------------------------|----------------|------------------------------|-------------|--|-----------------|
| Medium                 | Medium         | Medium                       | Low         | Medium                                 | Low             |
| Extreme<br>Temperature | Flood          | Groundwater<br>Contamination | Hurricane   | Infestation and<br>Invasive<br>Species | Nor'Easter      |
| Medium                 | Medium         | Medium                       | High        | Medium                                 | High            |
|                        |                | Severe Winter                | Shallow     |  |                 |
|                        | Severe Storm   | Storm                        | Groundwater | Wildfire                               |                 |
|                        | Medium         | Medium                       | Low         | Low*                                   |                 |

### Table 9.16-13. Hazard Ranking

### **Identified Issues**

The municipality has identified the following vulnerabilities within their community:

- Flooding may impact the Village's evacuation route. Part of Route 27 as you exit the Village is low lying at western end of Village.
- Severe storms, hurricanes, and nor'easters can severely impact power and communications, impacting emergency response and sheltering capabilities.
- The EMS building lacks backup power.
- Need to upgrade communications backup vehicle for mobile command. Current vehicle is a backup to the dispatch center. Will serve all the fire and ambulance districts on the east end. Will benefit entire area.
  - Dispatch entire 9<sup>th</sup> division and part of 7<sup>th</sup> division, Sag Harbor and East Hampton Police, all 911 dispatch.
- The Emergency Operations Center is located in the 500-year floodplain.

### 9.16.10 Mitigation Strategy and Prioritization

This section discusses past mitigations actions and status, describes proposed hazard mitigation initiatives, and their prioritization.

### **Past Mitigation Initiative Status**

The following table indicates progress on the community's mitigation strategy identified in the 2014 HMP. Actions that are carried forward as part of this plan update are included in the updated mitigation strategy table (Table 9.16-15). Previous actions that are now on-going programs and capabilities are indicated as such in the following table and may also be found under 'Capability Assessment' presented previously in this annex.

### Table 9.16-15. Status of Previous Mitigation Actions

#### **Completed Mitigation Initiatives Not Identified in the Previous Mitigation Strategy**

The Village of East Hampton has identified the following mitigation projects/activities that have also been completed but were not identified in the previous mitigation strategy in the 2014 HMP:

The Village uses outside vendors for cyber security and backs up data offsite.

#### **Proposed Hazard Mitigation Initiatives for the HMP Update**

The Village of East Hampton participated in a mitigation action workshop in June 2020 and was provided the following FEMA publications to use as a resource as part of their comprehensive review of all possible activities and mitigation measures to address their hazards: FEMA 551 'Selecting Appropriate Mitigation Measures for Floodprone Structures' (March 2007) and FEMA 'Mitigation Ideas – A Resource for Reducing Risk to Natural Hazards' (January 2013).

Table 9.16-15 summarizes the comprehensive-range of specific mitigation initiatives the Village of East Hampton would like to pursue in the future to reduce the effects of hazards. Some of these initiatives may be previous actions carried forward for this plan update. These initiatives are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in municipal priorities. Both the four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table below to further demonstrate the wide-range of activities and mitigation measures selected.

As discussed in Section 6 (Mitigation Strategy), fourteen criteria are used to evaluate and prioritize each proposed mitigation action. A numeric factor is assigned (-1, 0, or 1) to each criterion to provide a relative indication of the opportunities and constraints of each action. A numerical sum of the input provides the basis of the prioritization of actions wherein each action is assigned a category of Low, Medium, or High to indicate an implementation hierarchy. A High priority action indicates the jurisdiction will prioritize its implementation and apply for funding, if needed, as opportunities become available during the plan period of performance. This does not prevent the jurisdiction from implementing other ranked actions; however, this provides a snapshot of implementation priority at the time of this plan update.

Table 9.16-16 provides a summary of the evaluation and prioritization for each proposed mitigation initiative. Refer to the action worksheets at the end of this annex for more details on the high-ranked hazards identified first for implementation.

Notes:

Not all acronyms and abbreviations defined below are included in the table.

Acronyms and Abbreviations:

Potential FEMA HMA Funding Sources:

Timeline:

- CAV Community Assistance Visit
- CRS Community Rating System
- DPW Department of Public Works
- EHP Environmental Planning and Historic Preservation
- FEMA Federal Emergency Management Agency
- FPA Floodplain Administrator
- HMA Hazard Mitigation Assistance
- N/A Not applicable
- NFIP National Flood Insurance Program
- OEM Office of Emergency Management

#### Critical Facility:

*Yes Critical Facility located in 1% floodplain* 

#### Mitigation Category:

- Local Plans and Regulations (LPR) These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.
- Structure and Infrastructure Project (SIP) These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct manmade structures to reduce the impact of hazards.

Flood Mitigation Assistance Grant Program

Hazard Mitigation Grant Program

Pre-Disaster Mitigation Grant Program

Natural Systems Protection (NSP) – These are actions that minimize damage and losses, and also preserve or restore the functions of natural systems.

FMA

HMGP

PDM

• Education and Awareness Programs (EAP) – These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

#### CRS Category:

- Preventative Measures (PR) Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.
- Property Protection (PP) These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.
- Public Information (PI) Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.
- Natural Resource Protection (NR) Actions that minimize hazard loss and also preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.
- Structural Flood Control Projects (SP) Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.
- Emergency Services (ES) Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

#### <u>Cost:</u>

The estimated cost for implementation.

#### Benefits:

A description of the estimated benefits, either quantitative and/or qualitative.

#### Table 9.16-16. Summary of Prioritization of Actions

Note: Section 6 (Mitigation Strategy) provides for an explanation of the mitigation categories.

### 9.16.12 Staff and Local Stakeholder Involvement in Annex Development

The Village of East Hampton followed the planning process described in Section 3 (Planning Process) in Volume I of this plan update. This annex was developed over the course of several months with input from many Village departments, including: the Police Department. The Chief of Police represented the community on the Suffolk County Hazard Mitigation Plan Planning Partnership, Steering Committee, and supported the local planning process requirements by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

The following table summarizes who participated and in what capacity. Additional documentation on the municipality's planning process through Planning Partnership meetings is included in Section 3 (Planning Process) and Appendix C (Meeting Documentation).

#### Table 9.16-18. Contributors to the Annex

| Name        | Title/Entity    | Method of Participation                                   |
|-------------|-----------------|---|
| Mike Tracey | Chief of Police | Primary Point of Contact, attended plan participant       |
|             |                 | meetings, provided impact data, contributed to mitigation |
|             |                 | strategy  |
| Greg Brown  | L.T. of Police  | Secondary Point of Contact, attended plan participant     |
|             |                 | meetings, provided impact data, contributed to mitigation |
|             |                 | strategy  |

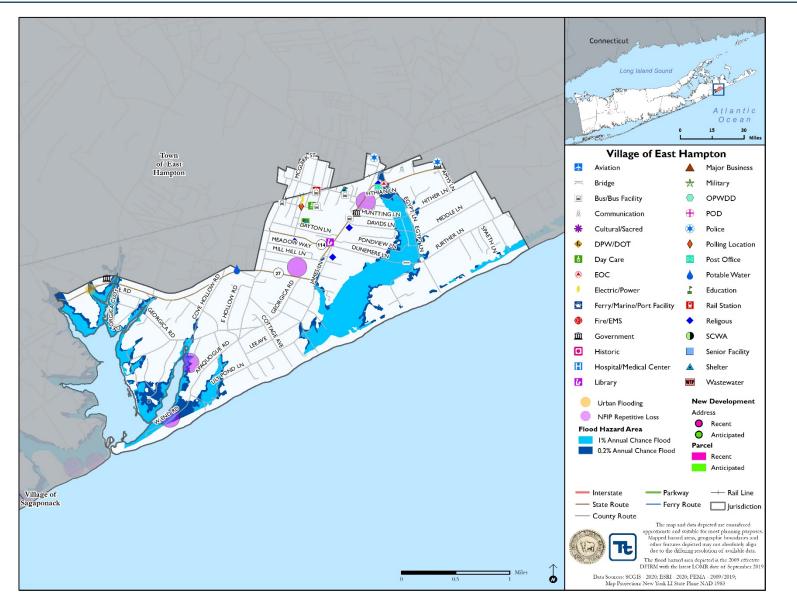

### 9.16.13 Hazard Area Extent and Location

Hazard area extent and location maps have been generated for the Village of East Hampton that illustrate the probable areas that may be impacted within the municipality. These maps are based on the best available data at the time of the preparation of this plan and are considered to be adequate for planning purposes. The maps have only been generated for those hazards that can be clearly identified using mapping techniques and technologies, and for which the Village of East Hampton has significant exposure.

| Project Number:   | 2020-East Hampton   | 2020-East Hampton Village-002 |  |                                 |   |  |  |  |
| Risk / Vulnerability                                      |   |                               |  |                                 |   |  |  |  |
| Hazard(s) of Concern:                                     | All hazards   |                               |  |                                 |   |  |  |  |
| Description of the<br>Problem:                            | Currently, the EMS building, located at 1 Cedar Street, does not have a generator to supply<br>power to the community during a power outage   |                               |  |                                 |   |  |  |  |
| Action or Project Intended                                |   |                               |  |                                 |   |  |  |  |
| Description of the<br>Solution:                           | The Village Engineer will research what size generator is necessary to supply backup power<br>the EMS building. The town will then purchase and install a generator at the Highway<br>Department. |                               |  |                                 |   |  |  |  |
